

Loyal Companion

*Caring for your pet, with method.
A doubt cleared beats a worry left alone.*

10 prompts to monitor your pet's health, feed it right,
train it gently and prepare the vet visit, all from a
simple phone.

GOOD TO KNOW

AI helps. It does not treat.

In 2026, a photo of your pet's eye, ear, skin or teeth returns an AI health report in seconds. Samsung showed such a feature at VivaTech, and apps like VetPati or MyFurtopia already do it. Handy to spot a sign early and prepare the visit. But an AI is not a vet. Three markers.

- **Spot early, do not diagnose**

AI helps you notice a sign and gauge urgency. The diagnosis belongs to the vet.

- **Emergencies are not guessed**

Pain, blood, trouble breathing, sudden listlessness: go to the vet, do not wait on an app.

- **Never medicate at random**

A human dose or remedy can kill a pet. Do not treat without the vet's advice.

The right reflex: AI prepares and alerts, the vet examines and decides.

THE METHOD

Ten prompts, five reflexes.

Caring well for a pet comes down to five reflexes: monitor its health, feed it right, train it gently, prevent trouble and be there for it. These 10 prompts make AI your assistant, never your vet. The care decision is shared with a professional.

Every prompt follows the same recipe: Role, Context, Task, Format. Copy the structure, change the brackets.

01 **Monitor health**

· 2 prompts

02 **Feed right**

· 2 prompts

03 **Train gently**

· 2 prompts

04 **Prevent trouble**

· 2 prompts

05 **Be there**

· 2 prompts

The Spotted Sign

PROMPT TO COPY

Role: you are a cautious pet health assistant.

Context: my [dog or cat], [age, breed], shows [a symptom: limping, wound, weepy eye].

Task: help me judge how serious and how urgent it is.

Format: what to observe closely, the signs that mean vet right now, what can wait 48 h, without giving a diagnosis.

What you get

A clear first marker: act now, watch, or relax. AI sorts the urgency, the vet confirms.

The Health Log

PROMPT TO COPY

Role: you are a medical secretary for pets.

Context: I jot down what I notice about my pet day by day.

Task: turn my notes into a clear log for the vet.

Format: a dated table (appetite, behaviour, symptoms, stools), the notable changes on top, ready to show at the visit.

What you get

A clean history that saves the vet time. Dated facts beat a fuzzy memory.

The Right Portion

PROMPT TO COPY

Role: you are a pet nutrition adviser.

Context: my [pet] weighs [X kg], is [age], is [active or neutered].

Task: suggest a sensible daily ration and the foods to avoid.

Format: the amount per day, the number of meals, the list of dangerous foods (chocolate, onion, grapes), to confirm with the vet.

What you get

Meals that fit and do no harm. Feeding well prevents half of health troubles.

The Fit Weight

PROMPT TO COPY

Role: you are a wellbeing coach for pets.

Context: I find my [pet] [too thin or too round] and want to help it gently.

Task: help me aim for a healthy weight, no extremes.

Format: simple markers to judge its shape, a gradual ration tweak, the signs that should take me to the vet.

What you get

Back to a fit weight, not by force. Steadiness beats sudden deprivation.

Gentle Training

PROMPT TO COPY

Role: you are a kind trainer, positive method.

Context: I want to teach my [pet] to [recall, house training, walk on a leash].

Task: give me a step-by-step reward plan, no punishment.

Format: the steps over two weeks, the rewards to use, the mistakes to avoid, in short sessions.

What you get

Calm learning that builds trust. Rewarding works better than scolding.

Behaviour Decoded

PROMPT TO COPY

Role: you are an animal behaviour specialist.

Context: my [pet] [barks, scratches, hides, soils anywhere].

Task: help me understand what this behaviour means.

Format: the likely causes (boredom, fear, pain, territory), what I can test, and when to see a professional.

What you get

A behaviour understood rather than punished. An annoying act often hides a need.

The Care Calendar

PROMPT TO COPY

Role: you are an assistant who plans the year's care.

Context: my [pet] is [age] and I want to forget nothing.

Task: build me a twelve-month prevention calendar.

Format: vaccines, deworming, flea and tick care, check-up, with reminders by season, to confirm with the vet.

What you get

A full year of care with no gaps. Preventing always costs less than curing.

The Safe Home

PROMPT TO COPY

Role: you are an expert in home safety for pets.

Context: I am welcoming a [pet] into my [type] of home.

Task: help me spot and remove the dangers.

Format: the risks room by room (toxic plants, cords, products, windows), the simple fixes, in order of priority.

What you get

A home where the pet explores safely. An accident avoided is worth every treatment.

The Prepared Visit

PROMPT TO COPY

Role: you are an assistant who preps the vet appointment.

Context: I am taking my [pet] in for [reason] and want to be clear.

Task: help me prepare the consultation.

Format: the information to give, the right questions to ask, and space to note the answers and the treatment, explained simply.

What you get

A useful visit where nothing is forgotten. Well prepared, you leave with answers, not doubts.

The Owner's Safeguard

PROMPT TO COPY

Role: you are a careful adviser who sets the limits.

Context: I am going to lean on AI to care for my [pet].

Task: remind me of the precautions before acting.

Format: AI is not a vet, a photo diagnosis is a hypothesis, never medicate without advice, emergency means consult, prices and vets are local.

What you get

Care taken with caution, not on reflex. AI sheds light, the vet heals.

THANK YOU · PET CHERISHED

One sentence, a big thank you.

These cards are offered to you, with no ads. Our only reward is your appreciation.

Give us 30 seconds

Take a moment to thank us on one of our networks. A public word, even a short one, encourages us to keep supporting you, one piece of advice at a time.
